DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to antisense oligonucleotides or ribozymes comprising at least one universal and/or degenerate bases, classified in class 536, subclass 24.5.
 - II. Claims 13-16, drawn to a method for cleaving a plurality of target RNA molecules of difference sequence, classified in class 435, subclass 6.
 - III. Claims 17-19, drawn to a method for reducing the deleterious effects of an antisense oligonucleotide, classified in class 435, subclass 91.1.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the antisense and ribozymes of invention I can be used in a method for cleaving a plurality of target RNA molecules of the same sequence, in a method for detecting the presence of a target RNA molecule in a population of cells, and a method for modulating the expression of a gene which encodes said target RNA molecule.
4. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case

Art Unit: 1635

invention I can be produced by chemical synthesis to produce an oligonucleotide having a sequence motif such as a CG dinucleotide or a poly-G motif with reduced deleterious effects. instead of starting with a deleterious antisense oligonucleotide and modifying the sequence of said oligonucleotide to reduce it's deleterious effects.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
